Summary

Java backend engineer with 4+ years across enterprise platforms, distributed systems, and data pipelines. Mostly Java/Spring Boot on AWS, with heavy Kafka and PostgreSQL usage. Recently been working with LLMs and AI tooling for code generation and config automation.

Technical Skills

Languages: Java (8–21), Python 3, Golang, SQL, JavaScript, Bash **Databases:** Oracle, PostgreSQL, Redis, DynamoDB, MySQL
Frameworks: Spring Boot, Struts, LangChain, React **Messaging:** Apache Kafka (EOS), ActiveMQ, SQS, gRPC, REST
Cloud & DevOps: AWS (EC2, S3, EKS, SQS, Bedrock, CloudWatch), Docker, Kubernetes, Helm, Terraform, Jenkins, CI/CD
Core CS: Design Patterns, System Design, OOPS, Data Structures, Concurrency, Agile/Scrum
AI Tools: AWS Bedrock (Claude), LLM Agents, RAG Pipelines, AI-assisted code generation and review

Experience

Member of Technical Staff – 2

Jan 2025 – Present

Nielsen Media India Private Limited

Bengaluru, India

Content Transformation – AI/LLM Data Platform (Java 17+, Spring Boot, AWS, Kubernetes)

- Built the data ingestion layer that pulls TV schedule data from 200+ sources via REST, FTP/SFTP, and S3. Handles OAuth/JWT auth and dedup. Cut new source onboarding from about 5 days to 4 hours.
- Wrote the document parser that handles PDFs, Excel, XML, HTML, DOCX, and CSV. Uses a pipeline of transformers with LLM-based field mapping – works well even on messy real-world schedule formats.
- Set up RAG workflows with AWS Bedrock (Claude) and LangChain that auto-generate parser configs and fix broken extraction rules. Eliminated most of the manual config work the team used to do.
- Deployed the doc conversion service on Kubernetes (Helm + EKS) with Terraform for infra and SQS for job orchestration. Handles a few thousand conversions a day.
- We use AI code generation tools internally – I own the validation side: automated test suites, code review, and making sure generated output meets our secure coding standards.

Enterprise Platform – Critical Customer Concerns (Java 8→21, Kafka, PostgreSQL, ActiveMQ)

- Work on the main NEd platform – a large-scale Java/Spring codebase backed by PostgreSQL, Kafka, and ActiveMQ. It manages 1M+ TV programs for 100+ channels. I handle production escalations (4-hour SLA) and own several upstream/downstream integrations.
- Rebuilt the Kafka pipeline layer with exactly-once semantics, partition-aware consumers, and dead-letter queues. High-throughput, zero data loss in production.
- Led the Java 8 to 21 migration. Also designed the NRT (near-real-time) flow using Kafka and ActiveMQ relay – schedule data that used to take days to propagate now reaches delivery endpoints within 60 minutes.
- Set up CloudWatch dashboards and alerting that cut our mean-time-to-detect for pipeline issues by about 70%.

Software Developer

Apr 2023 – Jan 2025

Connection Consultancy

India

- Broke a monolith into 5 Spring Boot microservices (Inventory, Availability, and related modules). Set up CI/CD for each – deployments went from 2 hours to about 15 minutes.
- Wrote safety stock and eligibility logic for 100K+ SKUs. Tuned the Oracle/PostgreSQL queries – got a 10% latency drop and 30% better throughput.
- Dockerized everything and deployed to Kubernetes with proper health checks, resource limits, and rolling updates.
- Integrated external Payment APIs and built a maker-checker approval flow for an internal reimbursement app. Full audit trail on every transaction.

Software Developer

Sep 2022 – Mar 2023

Immersive Infotech (Montran India)

India

- Worked on Kotak Mahindra Bank's PFMS system (Java/Struts). Delivered 50+ change requests, kept 100% SLA compliance, zero production incidents.
- Handled code reviews, wrote unit tests, and made sure financial transaction data was handled securely. Standard Agile workflow – sprints, standups, retros.

Software Developer Intern

Aug 2021 – Jun 2022

Cerebry (IPREP Learning Solutions)

India

- Built a framework that auto-generates math problems (Java + Python). Generates thousands of unique problems daily for the adaptive learning engine.
- Wrote data tagging and classification pipelines. Improved content discoverability by 25% across 50K+ learning resources.

Education & Certifications

Government Engineering College, Ujjain

Jun 2018 – Mar 2022

B.Tech – Computer Science & Engineering; CGPA: 7.0

Madhya Pradesh, India

Java (Advanced) – HackerRank | React (Basic) – HackerRank
